Skills/Technologies

- Languages: Python, C++, Kotlin
- Frameworks: Tensorflow, Keras
- Machine Learning: Supervised and Unsupervised Algorithms (Clustering)
- Deep Learning: ANN, CNN, OpenCV, YOLOv8,
- NLP: RNN, LSTM, Bi-LSTM, Word2Vec, Fasttext
- Other: Streamlit, Git, Github, Render

Education Background

- IIIT Bhubneshwar

  BTech in Computer Science Engineering

  Expected Graduation in 2027

Achievements

- **Led** the **winning project** at D3 2023, inter-college hackathon in AI/ML domain
- 'International Rank 6 @SOF IMO
- Medal of Distinction @SOF IMO
- Gold Medal in National Mathematical Olympiad Contest
- Gold Medal @SOF NCO (Class Topper)
- Gold Medal @SOF NSO (Class Topper)

About Me

An undergrad tech enthusiast in the domain of **Machine Learning** and **Deep Learning** with an inclination towards **NLP**, pursuing Btech in Computer Science, exploring the field of research in the same. Les the **winning project at D3**, an inter-college hackathon organized by IIIT BH in the AI/ML domain. Currently looking for a role as **AI/ML enginner/researcher.**

Projects

MoviesMania (Movies Recommendation System)

Vision/Goal:
- To provide an interface to users to find similar movies/web-series recommendations based on an uploaded video clip/YT Short.

Solution:
- To make use of the various faces of actors in the provided clip and the details provided(title, genre, plot) for the prediction of movie's title (if available in the dataset) or similar movies/web-series.

Result:
- Prediction of movie's title(if available in the dataset) with 78% accuracy and similar movies with 85% accuracy.

Tools used:
- Keras, Tensorflow, Word2Vec (Word Embeddings), MTCNN, NLTK, Spacy, VGGFace, OpenCV, Streamlit , Render

Multi-class News Classification WebApp

Vision/Goal:
- To provide an interface to users to freely lookout for movies and its reviews of their choice without having to worry about it getting spoiled alongwith sentiment analysis on reviews to get a basic understanding of the quality of the chosen movie

Solution:
- Made use of the a Machine Learning model(sentiment analysis) using Voting Classifer(SVC+Logistic Regression) and Deep leearning model(spoiler v/s non-spoiler) using Bi-LSTMs after thorough preprocessings and custom traiend Word2Vec

Result:
- Succesfully built the said WebApp with streamlit as front-end. Achieved an accuracy of 91% with precision 91 % and recall 90%

Tools used:
- Keras, Tensorflow, Word2Vec (Word Embeddings), Bi-LSTMs, NLTK, Spacy, Streamlit, Render

Movie Review System WebApp

- **Vision/Goal:**
- To provide an interface to allow users read spoiler free reviews along with a touch of sentiment analysis (on reviews) for better viewing exoerience.
- **Solution:**
- Made use of the a Machine Learning model(sentiment analysis) using Voting Classifer(SVC+Logistic Regression) and Deep leearning model(spoiler v/s non-spoiler) using Bi-LSTMs after thorough preprocessings and custom traiend Word2Vec
- **Result:**
- Succesfully built the said WebApp with streamlit as front-end. Achieved an accuracy of 91% with precision 91 % and recall 90%
- **Tools used:**
- Keras, Tensorflow, Word2Vec (Word Embeddings), Bi-LSTMs, NLTK, Spacy, Streamlit, Render
